

Robot Floor Scrubber Maintenance Checklist

Keep your machine clean, reliable, and ready — every shift.

DAILY

End of each shift

- Drain and rinse the recovery / wastewater tank
- Empty the debris tray
- Remove and rinse the squeegee; wipe blades dry
- Clear brushes of hair, string, and wrapped debris
- Wipe navigation sensors and cameras
- Park on the dock and confirm charging

WEEKLY

- Remove and deep-clean the filter basket
- Inspect squeegee blades for nicks, tears, flattening
- Check roller and side brushes for wear or flat spots
- Rinse out the clean-water tank
- Wipe down the chassis and wheels

MONTHLY / PERIODIC

- Descale the water system (per local water hardness)
- Replace worn brushes and squeegee blades
- Clean charging dock contacts and battery terminals
- Check for and install software / firmware updates
- Inspect cables, connectors, and fasteners

BATTERY & STORAGE

- Follow recommended charging cycles; avoid full discharge
- For long storage: charge to recommended level, power down, store dry
- Empty and dry all tanks before storage to prevent odor

 **Less upkeep by design:** Gausium Mira automates the most-skipped daily tasks — its self-cleaning cycle rinses the wastewater tank, filter basket, and squeegee, while the always-dry debris tray empties clean in one tip.
